FINISHES

PRODUCT DESCRIPTION

The Euro Coverstrip is a self-adhesive doorbar designed for use when two different pieces of wood, laminate and vinyl flooring meet.

These bars are ideal for protecting the edges of flooring in doorways. These low profile coverstrips are ideal for floors of the same thickness.

DIMENSIONS

This doorbar is 38mm wide, 4mm tall and comes in 2.7m lengths. The entire doorbar is visible once installed.

MAINTENANCE

Roberts Doorbars are easy to maintain, requiring no special materials to clean. Aluminium can be corroded by alkaline substances so alkaline cleaner materials should be avoided and quickly removed if contact is made. Cement and cement-based substances become alkaline in contact with water. It is important to correctly seal the area surrounding the door bar to prevent water pooling.

The aluminium finishes will oxidise over time. A polishing agent can be used to remove it.

The gold finish is susceptible to scratching and may be damaged by mortar, tile adhesive and grout. It can only be repaired by reapplying the anodising and aluminium will require testing to see if it can sustain the process. It is best to remove setting material immediately with a non-abrasive cleaner.

INSTALLATION

1. Measure the length of the vinyl flooring edge/doorway and cut the profile to match.
2. Fit the flooring as directed.
3. Peel the backing from both adhesive layers and press it firmly against the flooring.
