FINISHES

PRODUCT DESCRIPTION

The 8mm Nosing is a self-adhesive doorbar designed for protecting the edges of steps and finishing thick hard flooring material.

It provides a textured surface on top to prevent slipping. The textured underside bites into the flooring to prevent the material sliding underneath.

DIMENSIONS

This doorbar is 25mm wide, 8mm tall and comes in 2.7m lengths. The entire doorbar is visible once installed.

MAINTENANCE

Roberts Doorbars are easy to maintain, requiring no special materials to clean. Aluminium can be corroded by alkaline substances so alkaline cleaner materials should be avoided and quickly removed if contact is made. Cement and cement-based substances become alkaline in contact with water. It is important to correctly seal the area surrounding the door bar to prevent water pooling.

The aluminium finishes will oxidise over time. A polishing agent can be used to remove it.

The gold finish is susceptible to scratching and may be damaged by mortar, tile adhesive and grout. It can only be repaired by reapplying the anodising and aluminium will require testing to see if it can sustain the process. It is best to remove setting material immediately with a non-abrasive cleaner.

INSTALLATION

1. Measure the length of the vinyl flooring edge/doorway and cut the profile to match.
2. Fit the flooring as directed.
3. Peel the backing from the adhesive layer and press it firmly against the flooring.
